

# HAWAIIAN SHAVED ICE MACHINE

## OPERATING INSTRUCTIONS

### ICE REQUIREMENTS

Purchase ice cubes for the machine (no larger than 2-3 inches in size.) For 200 servings, you will need 100 pounds of ice.

### OPERATING MACHINE

1. Plug into grounded wall outlet. (Requires 120V, 1536W) Extension cords are not recommended. Make sure to leave enough room in the back of the machine to allow hookup of the drain hose.
2. Allow ice to soften in a cooler at least 1 hour before use. Using ice straight from the freezer will affect the quality of the shaved ice and will damage the shaver blade.
3. Lift cover lid and load ice cubes about ½ full then close the lid. Be sure ice is loaded evenly in each cavity. Place serving cup directly below the ice chute and turn power “ON” (1). The machine will not operate if lid is not closed!
4. Adjust the blade height with the adjustment knob (2) all the way to the left (Coarse) side to start, this may be adjusted to the right after some ice has been shaved.
5. To stop, turn the power switch to the “OFF” position. Should the motor thermal protector trip, reset by pushing the red button (3). The machine may need to cool off a bit before the reset button may take effect.

Note: Never allow any foreign or metallic objects (scoops, ice picks, etc.) in or around the shaver area of the machine.
